DIMENSIONS AND WEIGHT

Typical installation

The 4SK pump should be installed in boreholes of at least **4" (100 mm)** in diameter.

The pump should be lowered into the borehole, by means of the delivery pipe, to such a depth (min. 50 cm and at least one metre from the bottom) that it is completely immersed.

It is good practice to secure the pump by attaching a stainless steel or nylon cable to the anchorage points present on the delivery body.
